NewPro Non Darkening Sealer for Graffiti Magic matt & gloss

Description:

- A clear, water based primer sealer for use on **porous substrates** prior to the application of Graffiti Matic.
- Apply where application directly on the substrate would result in the wetting out or darkening of the surface.
- Non Darkening Sealer helps to prevent or minimize any change in the appearance of the coated surface.
- It can also be used to seal very porous substrates to improve the spread rate of the NewPro Graffiti Magic protective coating.

Uses:

- NewPro Non-Darkening sealer can be applied onto a wide variety of **porous surfaces**, for example, brick, mortar, concrete, render porous stone and bare timber.
- It is not suitable for sealed or previously painted surfaces.
- To test the effectiveness of the Non-Darkening Sealer we strongly recommend a small discrete trial application be carried out.

Application:

- Using a brush, spray or roller apply one good coat of NewPro Non-Darkening Sealer over a clean, dry substrate, first ensuring that any brick acid / etch cleaner has been thoroughly rinsed off.
- Coverage: 8 square metres per litre. On coat required giving an approximate.

SHAKE WELL BEFORE USE
