

Product Data Sheet

NewPro Nano Spray Finishing 4 in 1

Description

NewPro Nano Spray Finishing is a ready-to-use special product for lacquer, glass, and synthetic surfaces.

NewPro Nano Spray Finishing 4 in 1 is an ecologically friendly product based on water without environmentally harmful solvents.

NewPro Nano Spray Finishing 4 in 1 is unique, because it is water-based and applies finishing to lacquer, glass and synthetic surfaces in one process. In the recipe of the product nano particles react with the molecular system creating a nuclear structure. Liquids, dirt and other soiling cannot adhere to the surface anymore and can therefore be removed easily.

Advantages of the NewPro Nano Spray Finishing 4 in 1

- Water-repellent
- Creates deep gloss
- Dirt repellent
- Weather proof
- Glass corrosion protection
- Enhances the visual appearance and transparency of glass
- No glaring, no holograms
- UV resistant

Durability on surface: 3 months

Application Areas

For fast and efficient finishing for all kinds of lacquer, glass, and synthetic surfaces. NewPro Nano Spray finishing 4 in 1 is applicable to lacquer, synthetic and glass.

General:

NewPro Nano Spray finishing 4 in1 is highly effective, operational, resilient, and durable. NewPro Nano Spray Finishing 4 in 1 repairs minor damages to the coating singly.

Usage

250 ml of NewPro Nano Spray Finishing 4 in 1 are sufficient for a mid-size automobile.

Storage

12 months at + 4°C

Packaging in sets

- 1000 ml NewPro Car Cleaner > ready-to-use
- 250 ml NewPro Nano Spray Finishing 4 in 1 > ready-to-use

Advice

The handling instructions are a result of comprehensive research but the user is required to test the product and processing suitability for his specific purpose. In particular, we are not liable for any application or processing which we have not specifically approved in writing. The advice on the product data safety sheet is to be observed.

Application

Step 1: Cleaning

Clean the vehicle with the enclosed cleaner and remove all soiling and wax remains. This step might not be necessary for wax-free new vehicles. Polish if commendable using product which is free of silicone and wax.

Rinse off with clear water and let dry.

Step 2: Nano coating with NewPro Nano Spray Finishing 4 in 1

Spray NewPro Nano Spray Finishing on surface evenly and sufficiently so that the surface is coated and polish with NewPro Micro Fibre cloth immediately.

Spray on rims, lacquer, glass, and synthetics in one process. No overdosing possible.

Do not apply in blazing sun. Allow to stand for an hour if possible, do not expose to rain, dust or airflow immediately after processing.

After 24 hours the desired easy-to-clean effect becomes effective and the lacquer gets a brilliant deep gloss.

Soiling can now be removed easily from the surface, water just rolls off.

No polishing off, no waxing, no polish. Order the basic cleaning at the car wash.
