

Product Data Sheet

WP 48 Polishing agent for lime-like natural and artificial stone

NewPro Crystallization gives brilliant shine hardens the surface making it insensitive and easy to clean.

NewPro Crystallization can be applied to refurbish time-worn stone floors as well as to newly laid floors of lime-like natural or artificial stone.

NewPro Crystallization Application:

Spray Crystallization to treatment area. Apply crystallization with coarse steel wool pad with a single-disk machine. The crystallization process should be repeated two to three times until the best polish is reached.

When refurbishing worn-out stone areas all residue of old stone cleaning products must be removed before crystallization. We suggest to use NewPro wax remover to remove the residue.

The treatment area must be completely dry. Remaining moisture might lead to coloration in the stone. In case of remaining moisture we suggest to use Wet Crystallization WP40.

NewPro Crystallization ingredients:

Silica, wax, additives, and fragrances

For further maintenance we recommend our NewPro Marble Stone Soap or Terrazzo Stone Soap WP2.
