

## Facts about NewPro MicroFibre cloths

### It's the mixture that counts...

... The collective term micro fibre cloth encompasses blended fabric made of polyester and polyamide.

The polyester part (being the inexpensive raw material) is necessary for water absorption, the high-grade polyamide part is necessary for dirt absorption.

With DailyCleanBasics, NewPro prefers a high polyamide portion – the high-grade material – in favor of excellent dirt absorption. In addition, DailyCleanBasics micro fibre cloths are 100% silicon-free.

### This results in the following advantages:

- One-step, streak-free cleanliness
- Removes dust, dirt, and moisture
- Reduces detergent usage
- Reduces water usage
- High quality = longevity

### Application instructions, redefining hygiene:

Tuch mehrmals falten.

Fold cloths several times.

If folded twice, there are 8 partial segments. In case of extreme soiling, switch to the next segment.

Moisturize segments with aerosol can to avoid re-using of soiled water.

For hygienic reasons we recommend to assign a different color to each application area, e.g. kitchen = yellow, bathroom = green, windows and mirrors = blue, toilets = red)

These four colors are included in the practical starter set.

### Technical specification:

Material 70% polyester / 30% polyamide  
SIZE: 38 x 38 cm  
Weight: 27g / 190 g / per m<sup>2</sup>  
Colors: blue, yellow, red, green  
Washable without fabric softener
