NewPro permaSeal CARE 139 for Leather Impregnation Indoors

Product Description:

NewPro permaSeal CARE 139 is a solvent based product for the care and shine of leather surfaces based on chemical nano technology.

Maintenance and impregnating components keep the leather smooth and give water resistant properties. Nano additives ensure fast and permanent shine.

For best results we recommend the following steps:

1. Cleaning

The surface to be sealed has to be dry and free from soiling. If necessary clean with a moist cloth.

2. Application of NewPro permaSeal CARE 139

NewPro permaSeal CARE 139 for Leather Impregnation Indoors is sprayed onto the leather surface or spread evenly and thinly from a bottle with a sponge top or cloth. The surface has to be covered completely. If too much product has been applied, wipe off surplus product after drying with a dry cloth and soft polishing.

3. Desiccation

At room temperature and sufficient ventilation outdoors in a couple of minutes.

4. Cleaning of Treated Surfaces

Soiling can be removed from the leather surface with a moist cloth, afterwards **NewPro permaSeal CARE 139** should be re-applied.
